

Performance Testing Execution & Report Submission

Date	07 September 2026
Name	B.santoshi
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the performance-test coverage, workload scenarios, expected performance measures, and open performance issues for the Incident Lifecycle Automation in ServiceNow project. The scope is aligned to the incident lifecycle described in the project requirements: incident creation and classification, reassignment, knowledge usage, Level 2 investigation and resolution, emergency change creation, child incidents, and knowledge article generation.

2. Performance Test Analysis

This report identifies the performance areas to be evaluated. No executed performance measurements or load-test results were included in the supplied project materials; therefore, the Pass/Fail status below is recorded as Not Executed rather than inventing results.

Performance Area	Workload	Measures	Status
Incident Creation & Classification	Create incidents and populate classification fields	Response time, throughput, error rate	Not Executed
Incident List & Search	Open/filter incident lists and search records	Page response time, concurrent-user stability	Not Executed
Assignment & Reassignment	Assign incidents to appropriate support groups	Transaction response time, errors	Not Executed
Knowledge Management	Search/attach knowledge and generate knowledge content	Search response time, transaction time	Not Executed
L2 Investigation & Resolution	Update work notes, state and resolution details	Update response time, throughput	Not Executed
Emergency Change / Child Incident	Create related change or child incident from an incident	Transaction time, error rate	Not Executed

Performance acceptance should be based on agreed response-time, throughput, concurrency and error-rate thresholds for the target ServiceNow environment.

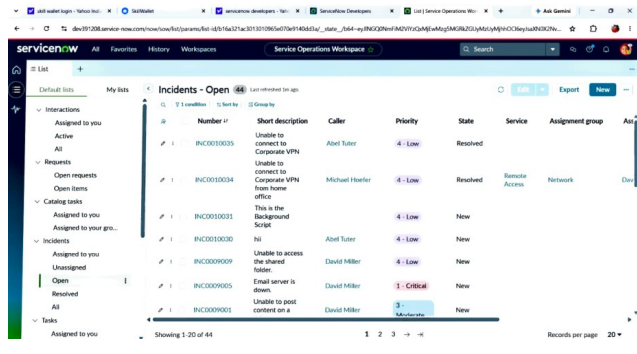

3. Test Case Analysis

This report shows the planned performance test cases by functional area. The supplied material provides project screenshots but does not provide a performance execution log, timings, concurrency results, or defect register; accordingly, the current execution status is Not Tested.

	Total Cases	Not Tested	Fail	Pass
Incident Creation	3	3	0	0
Incident Classification & Update	2	2	0	0
Incident Assignment / Reassignment	2	2	0	0
Incident Triage Search / Attach	2	2	0	0
Incident Investigation & Resolution	2	2	0	0
Incident Priority Change / Child Incident	2	2	0	0
Incident Triage Article Generation	2	2	0	0
	15	15	0	0

4. ServiceNow Project Evidence

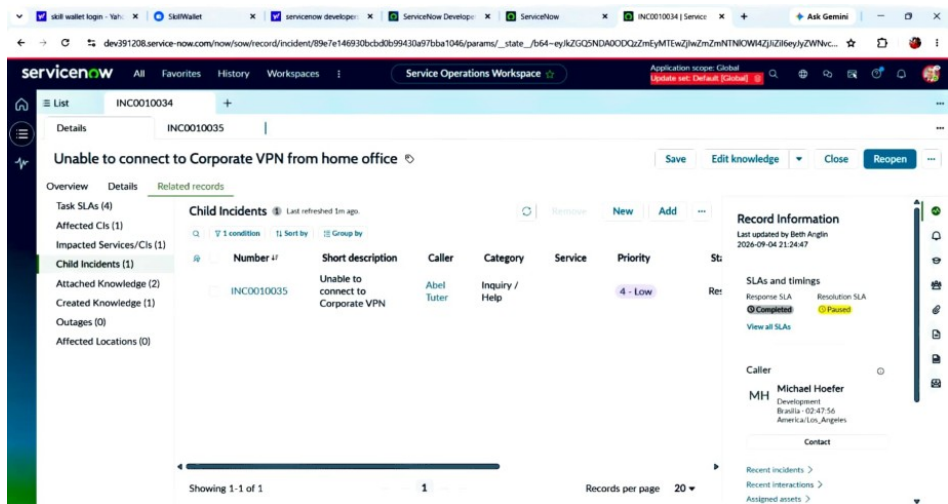

The following project screenshots are included as visual evidence of the ServiceNow incident-management functions covered by the performance scope. They are reproduced from the supplied ServiceNow project images PDF.

Incident list and filtering

Incident record, activity and SLA view

Child incident / related-record view
