Maximum Marks	4 Marks

Brainstorm&Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

This document applies the brainstorming and prioritization approach to the ServiceNow Incident Lifecycle Automation project, focusing on improving incident tracking, classification, assignment, escalation, SLA monitoring, and resolution visibility.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Project Overview: Incident Lifecycle Automation in ServiceNow

In many organizations, IT incidents are reported through emails, phone calls, or informal communication channels. This leads to poor tracking, lack of proper classification, delayed escalations, and minimal visibility into resolution progress. Without structured Incident Management, issues may remain unresolved, SLAs may be breached, and root cause tracking becomes difficult.

Selected Problem Statement:

Organizations need an automated and structured Incident Management process in ServiceNow to capture incidents, classify and prioritize them, assign them to the correct support team, monitor SLA progress, escalate delayed incidents, and track the incident through closure.

Step-2: Brainstorm, Idea Listing and Grouping

Idea / Area	Proposed Solution
Incident Creation	Create incidents from user reports and standardize incident records.
Automatic Classification	Use category, subcategory, service, and

	configuration item information to classify incidents.
Priority Calculation	Determine incident priority using impact and urgency.
Automatic Assignment	Route incidents to the appropriate assignment group based on classification.
Assignment to Technician	Allow support agents to assign incidents to themselves when appropriate.
SLA Monitoring	Track response and resolution SLAs and identify incidents approaching breach.
Escalation	Automatically escalate incidents when SLA thresholds or priority conditions are met.
Notifications	Notify users, agents, and managers about important incident updates.
Work Notes and Activity Tracking	Maintain a clear history of troubleshooting, actions, and communication.
Resolution and Closure	Capture resolution details and close incidents according to defined conditions.

Step-3: Idea Prioritization

Priority	Idea	Reason for Priority	Expected Benefit
1 – High	Automatic Classification&Priority	Core to consistent incident handling	Faster and more accurate incident processing
2 – High	Automatic Assignment	Reduces manual routing delays	Quicker assignment to the right support team
3 – High	SLA Monitoring&Escalation	Prevents delayed resolution and SLA breaches	Improved response and resolution performance
4 – Medium	Notifications	Keeps stakeholders informed	Better communication and visibility
5 – Medium	Work Notes&Activity	Provides incident	Improved

	Tracking	history	collaboration and auditability
6 – Medium	Resolution&Closure	Ensures completed incidents are properly documented	Better reporting and lifecycle control

Proposed Automated Incident Lifecycle

Incident Creation → Classification → Impact/Urgency Assessment → Priority Calculation → Assignment Group Selection → Technician Assignment → Investigation&Work Notes → SLA Monitoring → Escalation/Notifications → Resolution → Closure

Expected Outcome

The proposed Incident Lifecycle Automation solution will provide a structured and visible incident management process in ServiceNow. Automation will reduce manual effort, improve classification and assignment, support SLA compliance, enable timely escalation, and provide better visibility into incident progress from creation to closure.
